Profile

With over twenty years of experience in software development, I specialize in web technologies with a strong focus on cloud, distributed systems, and .NET Core.

I have experience in requirements elicitation, agile methodologies, architecture design, and continuous delivery.

I'm passionate about building scalable, resilient systems and increasingly interested in Site Reliability Engineering (SRE) and observability practices.

Work Experience

07/2022 – PRESENT

AMSTERDAM, NETHERLANDS

Senior Software Engineer
homeQgo

Architecture & Platform Engineering

Helped define technical direction in cross-team architecture sessions.

Standardize OpenTelemetry across .NET Core services.

Defined our monitoring strategy (dashboards, alerting, Slack integration) and built a cloud dev environment using Terraform, Azure Cloud, and Azure Pipelines.

ISO 27001 & Security Engineering

Designed and implemented monitoring/logging controls for certification. Centralized Azure security findings into Datadog via Azure Policies, Event Hub, and Azure Functions. Defined processes for incident response, secret rotation, and vulnerability management, and enforced network isolation through Azure subnets and private endpoints.

Event-Driven Architecture Transition

Supported our move from API-coupled services to an event-driven architecture (Azure Service Bus, DDD, microservices, Rebus, AsyncAPI, CloudEvents).

Work Experience

Observability Leadership

Defined SLIs/SLOs, led internal workshops on observability fundamentals, improved trace quality via custom .NET Core OpenTelemetry packages, and drove continuous refinement of alerts and SLOs.

08/2019 – 06/2022

AMSTERDAM, NETHERLANDS

Senior Software Engineer
CarNext.com

Working as a software developer, helping Carnext to achieve its goal of changing the way consumers buy second-hand cars in Europe

- Using AWS capabilities such as RDS, EC2, S3 and SQS
- Implementing background process using commands and events on top of Rebus
- Actively working on defining architectural and design changes in the system.

07/2018 – 08/2019 PORTO, PORTUGAL

Senior Software Engineer
KWAN

Working for Mindera on software improvements to Cascade's Human Resource System. The System is used by nearly 1000 clients of many sizes, from 25 to many thousands of employees.

- Implementing Event Sourcing architecture using RabbitMQ to integrate and decouple the system with third-party components.
- Implementing an authentication layer using IdentityServer to deliver the full potential of the OpenID Connect framework and enable SSO authentication across all Cascade subsystems.

08/2017 – 07/2018 PORTO, PORTUGAL

Senior Software Engineer
Farfetch

Enabling the application to process all the

Work Experience

payment requests, besides increasing the conversion rate for the Luxury Companies that rely on the Farfetch platform to sell.

- Creating Integration with Redis, Cassandra, and SQL Server as databases;
- Command Query Responsibility Segregation (CQRS) standards that integrate with a Service Bus Rest API.
- Using tools to monitor applications, such as New Relic, Kibana, and Nagios.
- Creating Projects Data integration with Kafka stream service;
- Active collaboration in the relational database migration from SQL to Cassandra database.

 10/2015 – 05/2017

 RIO DE JANEIRO E REGIÃO, BRASIL

Senior Software Engineer **Universidade Veiga de Almeida**

Working at Ilumno group, supporting integrations demands related to communication between universities in Latin America.

- Working for the Data Migration Project from University's Academic System to CRM Dynamics.
- Integrating the LMS System with Academic System Data.
- Migrating Data from the legacy Academic System to a new solution.
- Implementing SOA architecture for communication between universities using .NET Web API.
- Requirements Elicitation of solutions with teams from Colombia and Argentina.
- Defining API Interfaces for communication between universities.
- Defining Projects Architecture, and Applications Designs using DDD as a design framework.
- Implementing proper code versioning and quality practice, and propagation of this idea to development teams using Microsoft TFS.

 08/2010 – 10/2015

 RIO DE JANEIRO E REGIÃO, BRASIL

Senior Software Engineer **Infoglobo**

Working at Globo Organization, one of Brazil's

Work Experience

primary communication groups. All the work was done using Agile Approach, Continuous Integration, and a sharp quality culture. The work consisted of supporting the ad selling system for the Globo Press, guiding the user to consistency and a secure workflow of payment and delivery.

- Developing services using WCF.
- Implementing Aspect-oriented programming for the insertion of logs using the PostSharp Framework.
- Defining architecture and improvement designs for new applications related to the Portal.
- Developing using Baseline Security written on top of PCI security specifications.

Education

 01/2016 – 01/2018  RIO DE JANEIRO, BRAZIL

Software Engineer | Master of Business Administration (MBA) **Escola Politécnica da UFRJ**

 01/2012 – 01/2015  RIO DE JANEIRO, BRAZIL

Software Development | Software Development **Universidade Estácio de Sá**
